

Are you sure that you are secure?

Do you think that you need to improve your security? This guide shows when you need our solutions.

You
must

You must according to laws and regulations

If you by law must use approved crypto products, Advenica is the right choice! Advenica's solution for network encryption, **SecuriVPN**, provides customers with the strongest protection possible for their IP networks. It is approved for handling information up to and including EU Secret.

If you have demands for Cross Domain Solutions approved for HEMLIG/TOP SECRET level, we can provide products with national approval in certain countries. Advenica's Data Diodes **DD1000A** and **DD1000i** offers a powerful solution for effective, risk free and ensured one-way data flow between security domains.

You
should

You should according to standard or the NIS Directive

If you should follow a certain security standard or the NIS Directive, it is a good idea to use Advenica's products! Suitable products are our Data Diodes **DD1000A**, **DD1000i**, **DD1G** or our **ZoneGuard**. **ZoneGuard** enables a strictly controlled and filtered information exchange between networks and security domains.

You
need

You need to ensure a one-way information flow

If you need to ensure one-way information flow, you need a Data Diode – we can help you here! **Advenica's Data Diodes** are network devices for one-way communication that bridges two security domains of the same or different security levels.

You need to be sure that no unencrypted information is sent

Do you need more than software to secure your communication? **SecuriConnect** ensures long-term, sustainable communication protection in these quantum times!

You are using a firewall, but is it secure enough?

Do you need more protection than just a firewall? Advenica can offer tailor-made solutions depending on your needs. For example, **Advenica's ZoneGuard** secures your two-way communication by using allow and blocklisting.
